Native Fish Monitoring on the Little Colorado River

These trips are part of a long-term monitoring effort for native fishes in the Grand Canyon. We will be PIT-tagging humpback chub as part of a mark-recapture population study in the Little Colorado River (LCR). Volunteers will be flown into the LCR by helicopter and spend ten days camping in one of three camps operated by biologists from our office. Activities will include setting and checking 20 hoop nets daily and processing native fish including humpback chub, bluehead sucker and flannelmouth sucker.

Project Dates
- **APR. 13-23, 2010:** VOLUNTEERS NEEDED!!!!
- **MAY 11-21, 2010:** VOLUNTEERS NEEDED!!!!
- **SEP. 14-24, 2010:** VOLUNTEERS NEEDED!!!!
- **OCT. 12-22, 2010:** VOLUNTEERS NEEDED!!!!

If you are interested in joining one of our trips, please contact us at the information below. Spots fill quickly on a first-come, first-served basis. Travel assistance is provided for qualified individuals. In an email, along with your preferred trip dates, please include: a resume or brief summary of your background, highlighting your experience in conducting fieldwork and working in remote situations, along with contact information for three references that we can call to discuss your previous work history. We look forward to hearing from you!
